

Tie-down Chains And Binders

Tie-down Chains And Binders: Transport chains and ratchet chain binders tightens down heavy loads to your truck or flatbed trailer. Ideal for industrial, agricultural, logging, and towing applications. The standard link grade 70 chain is manufactured in a high-strength, low-alloy carbon steel for long-lasting quality.

Tie-down Chains And Binders: Transport chains and ratchet chain binders tightens down heavy loads to your truck or flatbed trailer. Ideal for industrial, agricultural, logging, and towing applications. The standard link grade 70 chain is manufactured in a high-strength, low-alloy carbon steel for long-lasting quality.

System 7 Grade 70 chain was designed for cargo securement, binding, towing and construction use. Also called Transport Chain, it averages a 20% higher load rating than High Test chain (Grade 43). Heat-treated Grade 70 carbon steel chain provides a strong and reliable hold. Heavy duty ratchet chain binder is made from forged steel. Yellow zinc finish is standard on chain. Induction heat treated, the chain meets all requirements set forth by the DOT / CVSA / CHP for truck tie-down use.

Grade 70 transport chain features a high strength-to-weight ratio that makes it light and easy to maneuver. Clevis grab hooks at both ends provide safe, no-slip handling. Ratchet load binder with smooth ratcheting mechanism makes it easy to tighten chains safely.

Ratchet Chain binders are the double swivel design for use with Grade 70 5/16" or 3/8" chain.

Binders are heat treated and proof tested with forged heat treated clevis hooks.

5/16"-3/8" painted forged steel load binders with Clevis grab hooks for safe, no-slip handling.
